PROJECTS UNDERTAKEN

- “A.I. DESKTOP VOICE ASSISTANT: JARVIS”
 - JARVIS, a desktop assistant is a voice assistant that can perform many daily tasks of desktop like playing music, opening your favorite IDE with the help of a single voice command. Jarvis is different from other traditional voice assistants in terms that it is specific to desktop and user does not need to make account to use this, it does not require any internet connection while getting the instructions to perform any specific task.
 - JARVIS is a desktop voice assistant which works on the voice command offered to it, it can do voice searching, voice-activated device control and can let us complete a set of tasks.
 - Tech Used: Python, Python libraries, Speech Recognition, A.I. & ML.
- Sorting Visualizer
 - A python GUI based application made using Tkinter that can be used to visualize different sorting algorithms like Bubble Sort, Merge Sort, Selection Sort, Insertion Sort, Quick sort and Heap Sort.
 - Tech Used: Python, Tkinter.
- Musico
 - An Android Music Player(Musico) developed with Java in Android Studio that can access all the media files in your phone and list the tracks for you.
 - Attractive user interface with loaded animations and music bars.
 - Listen to your songs on the go without even having an Internet connection. Play or pause your music. Listen to music even in the background of your device - you don't need to keep the app open all the time.
 - Tech Used: Java, Android Studio, Android SDK, ADT.
- Website Blocker Application
 - A python application that restricts entry into websites during some part of day.
 - The motive of making this application was to prevent anyone(Specifically students) from spending hours on youtube, social media and other websites.
 - Using this application a website can either be blocked permanently or for a specific period of time.
 - Tech Used: Python file handling, hosts file, DNS requests, IP, Scheduling tasks.
- Event organization using the Solidity Smart Contract
 - In this project we will organize an event using the solidity smart contract. This is an event organizing project.
 - In this project there are two entities first the organizer and the second the attendee.

- The organizer will organize the event and attendee will be the person who will be attending the event by buying the ticket for the event. An organizer will be able to create multiple events and the attendee can also buy multiple tickets for the multiple events.
- **Blockchain Voting System**
 - A Decentralized Election voting System project using Blockchain technology such as Metamask, Ganache and Remix IDE to record and report votes and prevent many types of voter fraud in elections.
- **A Guessing game(Rusty) developed using Rust programming language**
 - Rusty is a fun and challenging guessing game developed using Rust programming.
 - The game begins by selecting a random number, which the player must then attempt to guess. The player's objective is to guess the correct number within a set number of attempts, with the range of possible numbers being between 1 and 100.
 - If the player's guess is higher than the randomly chosen number, the game will indicate that a lower number should be guessed. Conversely, if the guess is too low, the game will prompt the player to guess a higher number. This pattern continues until the player correctly guesses the number or until the maximum number of attempts has been reached.

Pradumn Prakash Dubey

INTERSHIP AND TRAINING

- 1 month Internship from The Sparks Foundation Pvt. Ltd in Web Development.
- 28 days Training period completed from Hindalco Industries Limited, Unit-Mahan Aluminium, Singrauli, M.P.
